**Project:** 12135 Highway 128  
Geyserville, CA  
APN :132-160-043/046

Gabe,

This correspondence is provided as a follow up to the conversation I had at your office regarding the above referenced property. As discussed, this property is currently in escrow.

Original soil profile excavation and percolation testing was performed on this property as part of a subdivision. A site evaluation was performed with Dave Donovan (pits "L & M" on county records) and a perc test was performed by Patrick Hogan under the supervision of Rick Swinth on 10/30/2006.

We understand that plan check of the septic system plans and calculations needs to occur prior to obtaining septic design approval (plan check approval) for the proposed 4-bedroom septic system. The system would be sized based on the results of the previous and current percolation testing and provide 200% reserve area as well as meeting all applicable setbacks.

Do you foresee any other reason for which septic design approval (plan check approval) could not be obtained from your office?

We appreciate your attention to this matter. Please feel free to contact me with any questions.

As always, sincerely,

Jason Hocheder, P.E.  
President  
Always Engineering, Inc.
